Breaking new ground since 1988 and as we speak

Aquajet has been around for three exciting decades. Since 1988, the world has changed dramatically, but some things remain the same. Aquajet is still at the forefront of technology as the leading brand on the global hydrodemolition market. Now, Aquajet takes a giant leap into the future with the introduction of a new training program – Aquajet Academy.

Safety first – yesterday, today and tomorrow

Since Aquajet's establishment in 1988, the company has been committed to develop, manufacture and offer the best and safest hydrodemolition equipment on the market. The dedicated men and women at Aquajet have accomplished this by always trying to be one step ahead of the competition. During all these years they've never lost their touch. Quite the opposite, they're always pushing themselves to break new ground. Since the late 80's they have provided the market with the most advanced hydro-demolition equipment in the world. In 2018, Aquajet will raise the bar even higher with the introduction of new training program, called Aquajet Academy. But that's not all. At the annual Hydrodemolition days in April at Aquajet's headquarters in Holsbybrunn, Aquajet will unveil several groundbreaking products.

Welcome to Aquajet Academy

A basic training program is always part of the delivery after a customer has purchased an Aqua Cutter robot from Aquajet. The course participants go through a program with practice in safety, operation and service of the equipment. A certificate of approval is issued to each participant after completion. This allows the user to benefit from the product in a great way. The new program, Aquajet Academy, takes all this to a significantly higher level in order to unleash the full potential of the product. The training program covers all aspects of advanced hydrodemolition, which allows the operator to work more efficiently in a safer way.

"After a training course in the Aquajet Academy program, the operator is ready to take on most advanced challenges in the safest way possible. Our training program leads to a more efficient and timesaving operation. The operators can focus on the job at hand and spend less time on figuring out how to maximize the performance. To gain access to the product's full potential, education is essential. When the operators empower themselves with new skills, it's mutually beneficial for the contractor and the developer. It's basically a win-win situation for all", says Dennis Hilmersson, training and support manager at Aquajet Systems.

Six steps of education

The Aquajet Academy program consists of six important courses; Products (2 days) Hydrodemolition (2 days), Streamlining of work (2 days), Safety & technique (1 day), Service (1 day) and Train the trainer (3 days). All together, they cover all you need to know about handling, maintenance, training, safety, high-pressure regulations, pumps, hoses, and much more. All courses are adapted to the customer's knowledge and experience level.

Knowledge is power

Would you like to know more about Aquajet Academy or empower yourself with new skills? Contact your local Aquajet dealer in your country or contact Dennis Hilmersson.
