PCM WEIGHT KIT

Aqua Cutter 410

Weight kit for the tracked crawler

When the PCM (Power Control Module) of our Aqua Cutter 410 robot's is disconnected from the crawler and the crawler is used separately in operation, the Weight Carrier is the perfect solution to ensure optimal performance of the crawler.

The Weight Carrier is a weight package that equals the weight of the PCM and is easily attached to the crawler of the Aqua Cutter 410 robot's. Ensuring the crawler to move and perform in the same stable way as if the PCM was there and with the same capability to handle the reaction force of high-pressure water.

Facts

Weight kit (all weights) 300 kg (661lb)
