## **Aquajet launches new website focused on complete hydrodemolition solutions**

**Vetlanda, Sweden – May 2026** – Aquajet Systems AB has launched a completely redesigned website, created to make it easier for contractors, engineers, partners, and concrete repair professionals to explore hydrodemolition technology, equipment configurations, applications, and support resources.

The new website reflects Aquajet’s continued focus on providing complete hydrodemolition solutions — combining robotic hydrodemolition, high-pressure pumps, and wastewater handling into one integrated system.

“We wanted to create a platform that is not only product-focused, but also educational and application-driven,” says Roger Simonsson. “Hydrodemolition projects often involve many decisions regarding setup, water management, accessibility, and production requirements. The new website is designed to help customers better understand the method and find the right solution for their specific application.”

The updated website introduces a clearer structure and a lighter, more modern design while significantly expanding the amount of technical and practical information available online. Visitors can explore complete product information, hydrodemolition applications and setup recommendations, educational content about technologies and innovations, frequently asked questions, case studies from projects around the world, and a growing library of digital resources including webinars, technical articles, publications, videos, and downloadable materials.

The latest Aquajet Product Catalogue is also available directly on the website as both an interactive flipbook and a downloadable PDF.

The launch is part of a broader development phase for Aquajet Systems AB and reflects the company’s continued investment in strengthening its position as a complete solution provider for hydrodemolition.

Alongside the launch of the new website, Aquajet has recently relocated to a new headquarters in Vetlanda, Sweden — a major investment that brings together product development, production, training, service, and customer support in one modern facility. Together, the new headquarters and the new digital platform support the company’s long-term focus on delivering complete hydrodemolition solutions that combine equipment, water handling, training, and lifecycle support.

Special attention has also been given to improving accessibility for international users and partners. The website has been built to support multiple languages and improved translation functionality, helping make technical information easier to access across global markets.

“The website is an important step in how we continue to support both existing and future customers worldwide,” says Roger Simonsson. “We want it to be a platform where visitors can not only explore

our products, but also learn more about hydrodemolition, applications, technologies, and complete solution setups.”

The new website is now live at:

### **About Aquajet**

Aquajet, which was acquired by Brokk AB in 2016, is known as the industry leader in hydrodemolition machines and solutions, both in terms of quality and volume. The company’s headquarters and production facilities are in Vetlanda, Sweden. Similar to Brokk, Aquajet sells globally.
